No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     seq length:

A pharmaceutical composition comprising (I) or the polynucleotide or an inhibitor or antagonist of (I) is useful for treating cancers and inducing apoptosis in pathological cells. The composition is also useful for treating autoimmune diseases, inflammatory processes and viral or bacterial infortune.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Polypeptide encoding TATA box binding protein associated factor useful for treating e.g. cancers and inducing apoptosis has a do negative effect on the normal biological activity of the binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                N-PSDB;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                    associated subunits (TAR's) are components of the transcription farming and are thought to mediate transcriptional activation. This protein may be produced recombinantly from transformed host cells purified from human cells. hTAFIII05 specific binding agents such specific antibodies could be used for diagnosis (e.g. genetic hybridisation screens for hTAFIII05 transcripts), therapy (e.g. genetic therapy to modulate hTAFIII05 gene expression) and in the biopharmaceutical industry (e.g. as immunogens, reagents for isola cell specific activators or other transcriptional regulators).
                                                                                                                            This cDNA sequence represents a human tata-binding protein associated factor, hTAFTII105, isolated from Daudi cell nuclear extracts. Tightly associated subunits (TAF's) are components of the transcription factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         TATA-binding protein associated binding factor 105; human; activate hTAFII105; transcription factor; TFIID; transcriptional activation; antibodies; diagnosis; therapy; biopharmaceutical industry.

CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC polymerase are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as CC a food supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity CC and to produce other types of data and products dependent on DNA and CC diagnostic amino acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed CC specification, but was obtained in electronic format directly from WIPO CC at fit, wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                             This is the amino acid sequence of the human TATA-binding protein (TBP) associated factor (TAF) designated TAFIII30. The protein is a component of the TFIID fraction required for reconstituting RNA polymerase II in vitro transcription activity. The encoded protein has an estimated mol. wt. of 130 kD by SDS-PAGE.

The invention relates to purified proteins involved in transcription by RNA polymerase II, the RNA polymerase which transcribes messenger RNA. RNA polymerase II transcription proceeds in vitro upon addition of several nuclear fractions designated TFIIA, B, D, E, F, H, I and J to RNA polymerase II holoenzyme. Fraction TFIID has been shown to contains a TBP and other TAFs. Purification of TFIID and separation of its components reveals 7 proteins ranging in size from 30-250 kD. Serum raised against the TFIID fraction allowed cloning of the corresp. genes from lambda-gtll expression libraries.
                                                                                                                                                                                                                                                                                                                                      Sequence

TAF peptides derived from hTAFII30 alpha, hTAFII30 beta, hTAFII40, hTAFII170, hTAFII100, hTAFII130 alpha, hTAFII30 beta, hTAFII10, hTAFII100, hTAFII130, hTAFII140, hTAFII110 and nucleic acids encoding them, are used to modulate transcription, including transcription initiation. TAFS are nuclear proteins involved in RNA polymerase I, II and III transcription. The peptides act by binding to a different TAF, an activator, or TBP (TATA-binding protein) or competitively inhibiting association of a TAF domain with another compound, typically a protein like TBP or another TAF, an activator, or DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nucleic acids encoding human TATA-binding protein associated (TAF) peptide(s) - for production of recombinant peptide(s),

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                50
                         or more test compounds and determining the effects on the growth or viability of the culture of cells which preferably comprises fungal cells or yeast cells. Preferably the identified compounds interact with, or modulate (preferably inhibit) activity of C. albicans Ep. The inhibitor compounds identified by the method are useful for preventing or inhibiting fungal, particularly C. albicans growth in culture or in a mammal. The antifungal agents interact with essential fungal elements that can be used to treat fungal infection by preventing the growth and preferentially killing the fungal infection by preventing the growth and preferentially killing the fungi, but does not inhibit the biological activity of mammalian homologues. This amino acid sequence represents a target protein used to test the antifungal compounds, described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Moore J, Bu
Mendillo M,
                                                                                                                                                                                                             The invention describes a method of screening a candidate antifungal compound for interaction with essential proteins (EP) or for modulation of EP activity e.g fungal gene transcription. The proteins tested in the invention include RPC34, POP3, TFA2, NAB2, MPT1, MTR2, BOS1, POL30, RSA2 SQT1, MTW1, TFB1, SPC98, BFR2, RNA1, GCD7, SKI6, NIP1, LCP5, NCE103, ECO1, ORC2, CNS1, YPD1, TIM10 and SRB4 from S. cerevisiae, C. albicans and human homologues. The method involves contacting a culture with one
                                                                                                                                                                                                                                                                                                                                                                            Screening candidate antifungal compound for interaction with essential protein, modulation of essential protein activity, binding to essentia protein, by contacting protein with test compound and determining efforts.
                                                                                                                                                                                                                                                                                                                                       Claim 1; Figure 79;

            This is the amino acid sequence of the Drosophila TATA-binding protein (TBP) associated factor (TAF) designated TAFTII10. The protein is a component of the TFIID fraction required for reconstituting RNA polymerase II in vitro transcription activity. The encoded protein has an estimated mol. wt. of 110 kD by SDS-PAGE, a calculated mol. wt. based on sequence of the gene of 99.4 kD and an estimated pI of 10.1.
                                                                                                                                                                                                                                                                                                            28-JAN-1994;

RNA polymerase II transcription proceeds in vitro upon addition of several nuclear fractions designated TFIIA, B, D, E, F, H, I and J to RNA polymerase II holoenzyme. Fraction TFIID has been shown to contains a TBP and other TAFs. Purification of TFIID and separation of its components reveals 7 proteins ranging in size from 30-250 kD. Serum raised against the TFIID fraction allowed cloning of the corresp genes from lambda-gtll expression libraries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAW25028 represents TATA-binding protein associated factor (TAF) polypeptide, dTAFIII0 (mol. weight 110kD). TAF peptides derived from dTAFII30 alpha, dTAFII30 beta, dTAFII40, dTAFII60, dTAFII60, dTAFII60, dTAFII10, dTAFII10, dTAFII10, dTAFII10, dTAFII10, and dTAFII250, their human equivalents and nucleic acids encoding them, are used to modulate transcription, including transcription initiation. TAFS are nuclear proteins involved in RNA polymerase I, II and III transcription. The peptides act by binding to a different TAF, an activator, or TBP (TATA-binding protein) or competitively inhibiting association of a TAF domain with another compound, typically a protein like TBP or another TAF, an activator,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                28-JAN-1994;

The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

                                                                                                                                                                                capable of detecting 1000 or more genes from Drosophila. The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents a human transcriptional regulatory factor containing a bromo domain. The factor interacts with proteins involved in the chromatin-mediated transcription regulatory mechanism. It binds to hSNF2H, hSNF2L and NCOA-62/Skip. It can be used for screening compounds binding to it and acting as agonists or antagonists, which are potentially useful for the treatment and prevention of cancer and other cell proliferation disorders.
